

Wrist Worn Fall Detector

Many older people are keen to maintain their independence for as long as possible rather than have to move to a residential home or even move in with family. Of course, while it is great for older people to be independent it can also come with risks and cause worry for family members. The risk of falls, accidents, and health issues is higher as you get older, so having some form of protection is important if you do live alone or spend long periods of time alone at home.

There are lots of alarm systems you can choose from for elderly people, all of which are designed to provide assistance and support in the event of an accident or incident where the person needs help. One of the options you can choose from is a wrist worn fall detector, which provides a convenient way for older people to get help in the event of a fall.

How Does a Wrist Worn Fall Detector Work?

Many older people have pendant or wrist alarms that enable them to push a button in the event of a fall or other accident so help can be arranged by responders. However, there are situations where the person may not be able to press the button to call for help.

For example, they may have been knocked unconscious as a result of the fall or may be too weak and frail to push the button. This means that they could be left lying there without help for hours or even days because nobody is aware of what has happened. With a wrist fall detector, responders will be automatically alerted in the event of a fall without the person having to press a button in order to call for help.

What Are the Benefits of a Wrist Worn Fall Detector?

So, what are the main benefits of using a wrist worn fall detector? Well, there are actually many benefits. Not only are these devices comfortable for wearers and easy to access but they also detect falls automatically so that the relevant people can be alerted even if the wearer is unable to press the button. The main benefits include:

- Comfortable to wear – worn like a watch
- Easy for wearers to reach and access
- Automatic detection of falls
- An affordable protective solution for older people
- Provides added safety and peace of mind
- Ideal for those who live alone

For those who have very limited mobility and may struggle to reach a pendant around the neck, the wrist-based version is an excellent solution that can help them to stay safe and get help when needed.
